Mint Velvet: FY22-FY25 performance review

Sabre Retail Fashion Ltd (07920155), filed accounts, 52-week years to late December. Independent analysis of public filings; not affiliated with or endorsed by Mint Velvet or Sabre Retail Fashion Ltd.

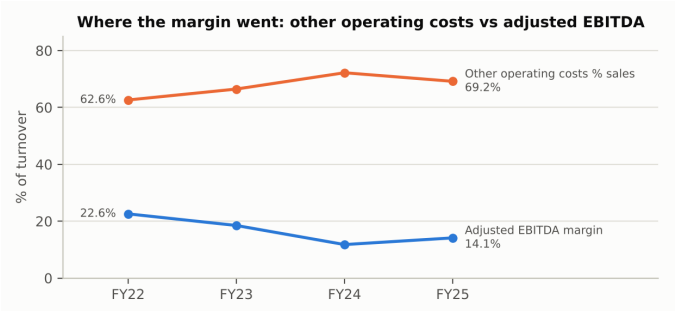

GBP m unless stated	FY22	FY23	FY24	FY25
Turnover	143.7	139.8	134.7	150.2
Growth	+22.0%	-2.7%	-3.6%	+11.5%
Gross margin (after retail-channel costs)	35.1%	30.9%	23.1%	26.7%
Other operating costs % turnover	62.6%	66.5%	72.2%	69.2%
Staff costs % turnover	12.9%	13.6%	13.4%	14.3%
Adjusted EBITDA (management, post-rent)	32.4	25.9	15.9	21.2
Adjusted EBITDA margin	22.6%	18.5%	11.8%	14.1%
Profit before tax	30.7	23.7	14.2	20.2
Change in op. profit / change in turnover	0.16	2.02	1.87	0.40
Year-end stock (weeks of turnover)	14.2 (5.1)	11.5 (4.3)	16.7 (6.5)	15.0 (5.2)
Standalone / concession stores	48 / 56	52 / 49	54 / 48	53 / 51
Turnover growth vs ONS clothing stores (ppt)	+0.4	-10.3	-1.4	+8.3

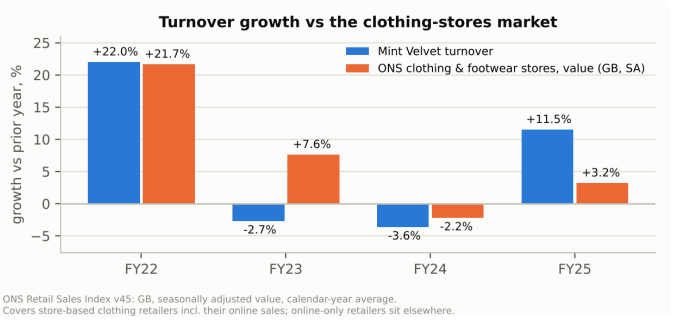

Blue adds to profit, red reduces it. Other costs (rate): change in costs outside staff, rent, D&A and FX as a % of sales. Source: filed accounts; built from the later year's filing.

Blue adds to profit, red reduces it. Other costs (rate): change in costs outside staff, rent, D&A and FX as a % of sales. Source: filed accounts; built from the later year's filing.

ONS Retail Sales Index v45: GB, seasonally adjusted value, calendar-year average. Covers store-based clothing retailers incl. their online sales; online-only retailers sit elsewhere.

What the numbers say

• **Operating leverage.** Turnover fell 6.2% from FY22 to FY24 and PBT fell 53.7%: GBP 2.02 and GBP 1.87 of operating profit were lost per GBP 1 of lost sales in FY23 and FY24. FY25 gained GBP 0.40 per extra GBP 1 (turnover 11.5%, PBT 41.9%).

• **Other operating costs drove it.** Costs outside staff, rent, D&A and FX went from 62.6% to 72.2% of turnover from FY22 to FY24, 81% of the FY24 profit fall. The pool mixes product cost with commissions, marketing and distribution, and the filings do not split it after FY22.

• **Payroll is the next pressure.** FY25 staff costs rose 19.1% against turnover 11.5%; employer social security reached 9.6% of wages, with the April 2025 NIC change in only about 38 of 52 weeks.

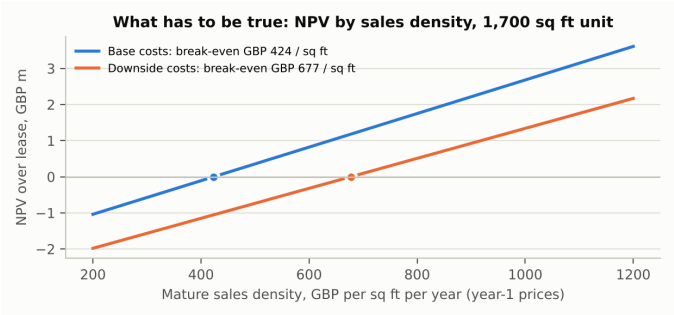

• **Stock.** Cover peaked at 6.5 weeks of turnover in FY24 (GBP 16.7m) and was back to 5.2 in FY25; the obsolescence provision is 7.6% of gross stock.

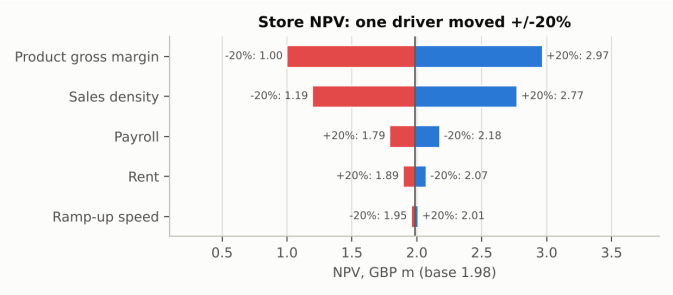

Bridge method: each bridge is built from the later year's filing and reconciles to reported PBT to GBP 0. 'Other costs (rate)' = change in [cost of sales + admin - staff - rent - D&A - FX] as % of turnover, times current turnover. Reported gross margin is after retail-channel costs (accounts note 2.6). Adjusted EBITDA is management's measure: operating profit + D&A + impairment, excluding exchange differences (rebuilt exactly each year). FRS 102 throughout; the FRS 102 lease amendments apply to periods beginning on or after 1 Jan 2026, so FY27 is the first year they bind (FY26 began 28 Dec 2025): a comparability break to flag. New-store appraisal: 1,700 sq ft regional-mall unit (illustrative)

Store-level data for Mint Velvet is not public. Every input below is a labelled assumption, a filing proxy (company-wide average, upper bound) or a public statutory rate. The output is what has to be true, not a forecast.

Break-even: GBP 424 per sq ft a year (mature sales GBP 0.72m) returns the 10% hurdle over a 10-year lease under base costs. Under downside costs it needs GBP 677 per sq ft. At the assumed GBP 850 per sq ft the base case pays back in 24 months; the downside case (GBP 600 per sq ft) takes 108 months and has NPV GBP -0.32m.

Scenario	NPV (GBP m)	IRR	Payback (months)	Break-even GBP/sq ft	4-wall margin, yr 3	Payroll % sales, yr 3
Base	1.98	56%	24	424	38%	13.2%
Downside	-0.32	3%	108	677	15%	17.6%
Upside	3.82	121%	11	335	47%	10.8%

Key inputs

Input	Base	Low	High	Basis
area sqft	1,700	1,700	1,700	SOURCED
mature sales density	850	600	1,100	ASSUMPTION
product gross margin	71.0%	66.0%	74.0%	FILING_PROXY
rent per year	95,340	70,000	200,000	FILING_PROXY
rateable value	55,000	40,000	90,000	ASSUMPTION
fitout capex	528,000	323,333	931,500	FILING_PROXY
stock pct sales	10.0%	8.2%	12.4%	FILING_PROXY
other opex pct sales	10.0%	6.0%	15.0%	ASSUMPTION
dilapidations at exit	26,604	8,271	40,000	FILING_PROXY
lease term years	10	5	15	ASSUMPTION
discount rate	10.0%	8.0%	14.0%	ASSUMPTION
nlw hourly	12.71	12.71	12.71	SOURCED
employer nic rate	15.0%	15.0%	15.0%	SOURCED
nic secondary threshold	5,000	5,000	5,000	SOURCED

Using it on a real site

• Replace the proxies with the site's own numbers: heads-of-terms rent and incentives, the unit's VOA rateable value, the fit-out quote and the expected staffing plan (config/assumptions.yaml, or the blue cells in the workbook).
• Set the density from comparable stores' trading, then read the headroom: assumed density over break-even density, under base and downside costs.
• Approve on the downside case, not the base: the decision is whether comparable stores trade above the downside break-even.

Payroll is built bottom-up: 2 staff on the floor for 64 trading hours, 2 salaried managers, part-time associates at NLW GBP 12.71 plus 5%, statutory holiday pay (12.07%), employer NIC at 15% above GBP 5,000 and 3% auto-enrolment pension. At maturity: about 206 labour hours a week, 8.3 heads, GBP 135 sales per labour hour. Business rates use the 2026/27 retail, hospitality and leisure multipliers on an assumed rateable value. Store losses are relieved against group profits; there is no terminal value beyond the lease. The Python engine is the source of truth; outputs/store_model.xlsx carries the same model in live formulas, recalculated in CI to match. The tornado's +/-20% gross-margin case (57%-85%) is a stress, far wider than the 70.0%-71.0% product margin in the FY21-FY22 filings.
